

# Cotton Variety Trials - 2005

*Joel C. Faircloth, Cotton/Peanut Specialist, Tidewater AREC*

## 2005 Variety Yield Results

The Virginia Tech Cotton Variety Performance trial included 66 varieties at the Tidewater (Suffolk) Agricultural Research and Extension Center (TAREC). Fifty-six transgenic varieties (25 Roundup Ready Flex, 17 Bollgard, 12 Roundup Ready, and 2 Liberty Link), two conventional varieties, and eight new experimental varieties were evaluated in 2005.

The Virginia Cotton Variety Performance trials are conducted annually to provide an unbiased comparison of commercially available varieties, utilizing uniform cultural practices within each location. Variety performance in these trials was evaluated using standard production practices for nontransgenic varieties. At all locations, lint yield and fiber quality were obtained.

Trials in various locations in the production area make it possible to evaluate variety performance under the wide range of soil and climatic conditions existing in Virginia. The test was conducted on a Eunola loamy fine sand soil at TAREC. Additional strip trials were conducted at four locations and data were pooled and analyzed to evaluate eight transgenic varieties. The strip trial locations and cooperators are listed in Table 7.

The variety trial was planted on May 10. The trial was harvested on October 31.

## Summary of Yield and Performance

Table 1 summarizes the performance of all the entries. Tables 2 through 7 summarize the performance by variety: Table 2 Roundup Ready Flex; Table 3 Bollgard; and Table 4 Roundup Ready, Liberty Link, and conventional. Table 5 presents the two-year averages for all varieties and Table 6 presents the three-year averages. Tables 7 and 8 present the specifics and results of the county strip trials.

In 2005, yields at the TAREC location ranged from 1,077 to 1,662 lb lint/A. Most varieties yielded higher in 2005 than 2004, consistent with state averages.

## Variety Selection

Variety selection should be independent of weed or insect problems and should be based on yield and quality performance. If you have a difficult weed problem, then select the variety with the greatest potential for yield and quality that will help you manage the weed problem. Growers are advised to plant only a limited acreage of any new variety until more information and experience is available from a wide range of soil and climatic conditions. This has become more difficult in the past five to ten years because the commercial variety list has changed rapidly. The trend is likely to continue, considering several new transgenic technologies that will be registered over the next several years.

## Yield Results, Tidewater Agricultural Research and Extension Center, Suffolk, Va.

## Summary of County Strip Trials

Table 7. Location, cooperator, and agent at all variety strip trials, 2005.

Location	Cooperator	Agent
City of Suffolk	Mike Griffin	Rex Cotton
Isle of Wight	Phillips Edwards	Glenn Rountree
Dinwiddie	Lance Everett	Mike Parrish
Sussex	Bob Rogers	Kelvin Wells
City of Suffolk	Tommy Rountree	Rex Cotton

Table 8. Combined yield, fiber quality, and performance of county variety strip trials (5 locations), 2005.

Seed Company	Variety	Lint Yield, lb/A	Lint, %	Mike	Len. (in.)	Fiber Properties	
						Str. (g/tex)	Uni.
DeltaPine	DP 445 BG/RR	1334.5	43.5	4.1	1.15	31.9	83.9
DeltaPine	DP 444 BG/RR	1314.0	43.9	3.8	1.14	30.1	82.9
