

Dr. Dorrie Main is a Professor of Bioinformatics at Washington State University, WA, USA. She is the principal investigator of CottonGen and four other crops databases and has over 20+years of experience in computational genomics, genetics, and breeding. She believes that ICGI has been integral in developing a community approach to developing genomic resources for cotton that can be shared and widely utilized. If elected to co-chair the bioinformatics and computational genomics section of the ICGI she agrees to work diligently in that role to advance the mission of ICGI to increase knowledge of the structure and function of the cotton genome for the benefit of the global community.
